**CAUTION for Long Acting Drench!**

- Every drench used selects for resistance.
- With the right information strategic capsule use can continue to boost production in a sustainable way.
- Capsules used wisely can significantly boost profit.

## Cattle Lice Treatment

Treating lice in late summer/early autumn may be necessary but remember the earlier you treat the higher the likelihood that you'll need to treat again, as numbers have a longer period to re-populate, and winter is when conditions are optimal. You can target just lice with **Destruct** (organophosphate) and **Blaze** (synthetic pyrethroid), or you can use products like **Genesis** and **Cydetin** which will target both lice as well as internal parasites which are often more of an issue at this time of the year.

LICE TREATMENT ONLY

Dose 1ml per 10kg  
**Destruct 5L**  
\$267.10 Incl GST

Dose 1ml per 20kg  
**Blaze 5L**  
\$435.00 Incl GST

Dose 1ml per 20kg  
**Genesis 5.5L**  
\$579.50 Incl GST

Genesis is an Abamectin and restricted if supplying to Oceania Dairy.

POUR-ON WITH LICE CONTROL

**FREE Delivery Service**

Novel active drenches  
Use them effectively in autumn?

## NOVEL DRENCHES

April-May is time to use a novel active drench. After repeated exposure to a traditional drench there is the chance that resistant worms may have accumulated in the gut. Cleaning these out prior to the winter with a novel active protects your farming future.

For advice you can trust!

500ml  
**\$94.50**  
Incl GST

500ml  
**\$151.00**  
Incl GST

## Drenching Dairy Cattle in Autumn

- There is considerable trial work available both nationally and in our district showing that drenching lactating dairy cattle is likely to result in an increase in milk solids production.
- Cydetin pour on and Eprinex are 2 of the most effective anthelmintics, both having significant persistent activity against Ostertagia species of 4 weeks or more.
- Both Cydetin and Eprinex have nil meat and nil milk withholds making their use in lactating herds very easy to manage.
- Genesis cattle pour on is a premium abamectin product with 14 days persistent activity. It has 35 days meat withhold so needs to be managed carefully when making culling decisions.

Whatever your approach to autumn drenching of your herd we are always available to give professional advice on the products available that will optimise your herd performance.
