Trace Element Supplements

VET LSD
VETERINARY LIVESTOCK SURVIVAL DRENCH

High on Performance, Survivability and Profit!

VET LSD contains Vitamins A, C, D, E, Selenium, Chromium & Iodine

Given to ewes Pre-Tup and Pre-Lamb for enhanced lamb survivability.

Flexidine Iodised Oil Injection

Can you justify an investment in Iodine?

Lamb survival is the biggest area of potential gain in sheep production. Example ...

3000 Ewe Flock	Scanning Tailing	160%	4800 Lambs
		130%	3900 Lambs

An improvement in lamb losses by 5% with iodine supplementation is 150 lambs (at \$110/lamb is an extra \$16,500 income from a \$2,400 investment).

There is enough evidence to show iodine is an issue in high country areas and when ewes are wintered on brassicas. Iodine deficiency has a part to play in the lamb birth weight and survival complex.

Flexidine
Iodised Oil Injection
ACVM A007866

Flexidine™ provides a long-acting supply of iodine. In deficiency, supplementing iodine leads to:

- ✓ Decreased perinatal deaths
- ✓ Increased lamb vitality
- ✓ Reduced goitre
- ✓ Increased fertility

Only **Flexidine**™ prevents iodine deficiency from conception to lambing in **one** simple injection.

* This is a prescription medicine only available following a veterinary consultation.

Autumn Cattle Drench

Treat animals in Autumn as they face the demands of advancing pregnancy and seasonal larval challenges.

Trial work has shown the benefits of mitigating the stress that cows are under at this time of the year, including:

- Improved Body Condition Scoring (BCS) as cows are metabolically more able to gain condition.
- Better BCS at calving is a critical factor in determining an early return to cycling.
- Pasture larval contaminates peak in Mar-Apr.
- **Milk Solids has proven to increase by 0.03kg/day, which equates to an extra 1.26kg MS over a six week period (approx \$10)¹**

¹ Journal of Veterinary Parasitology / The effect of mid-lactation treatment with topically applied eprinomectin on milk production in nine New Zealand dairy farms. 2017 / K.E.Lawrence et al.

Young cattle are rapidly growing and are yet to develop natural immunity against worms, so it's important to use a highly efficacious dual active injectable.

Cattle Lice Treatment

Treating lice in late summer/early autumn may be necessary but remember the earlier you treat the higher the likelihood that you'll need to treat again, as numbers have a longer period to re-populate, and winter is when conditions are optimal. You can target just lice with **Destruct** (organophosphate) and **Blaze** (synthetic pyrethroid), or you can use products like **Reflex** Pour-On & **Cydectin** Pour-On which will target both lice as well as internal parasites which are more prevalent in autumn.

EXODUS
LONG ACTING INJECTION

CYDECTIN
Long Acting Injection for Sheep

- 91 Days protection against *Haemonchus contortus*
- 112 Days protection against *Ostertagia circumcincta*
- 42 Days protection against *Trichostrongylus colubriformis*

91 MEAT Withhold

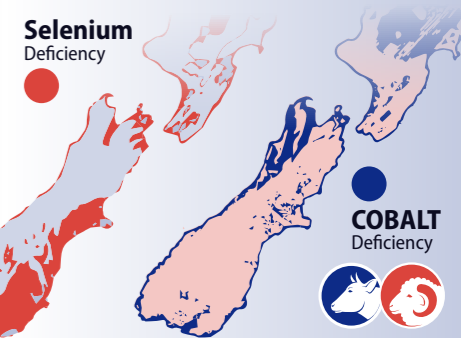

Stage TWO B12 and Selenium Supplement (deficiency)

SMARTSHOT B12 PLUS Se

Smart Shot long acting B12 and selenium restores deficiencies with the convenience of just one injection.

- B12 & Selenium for up to 6 months in sheep.

Selenium and Cobalt deficiency is common in NZ as you can see from the maps. Our area is traditionally low in Selenium. * Smartshot 1.5ml Dose delivers 18mg Selenium and 4.5mg Cobalt compared to Bionic Plus delivers 24mg Selenium and 118mg Cobalt.

Drench Programme Toolbox

Target Treatment

Select animals for treatment based on risk.
Target Long Acting treatments towards multiples and light condition stock.

Refugia

Leave some stock un-drenched to ensure that there are still worms that are susceptible to drench in the worm breeding population base.
