DRENCH-CHECKS

- There has been a dramatic rise in identification of triple drench resistance in our area this season.
- Using the same drenches on farms where drench resistance is established makes the situation worse.
- A drench check can identify resistance issues early giving you more options.

1. Collect 10 poo samples from sheep 8-10 days after drenching.
2. Drop these into your nearest Veterinary Centre by the Big Blue Cross.
3. Results in a veterinary interpretation are back to you within 24 hours.

DRENCH RESISTANCE IS REAL!

Drench-check is a simple cost effective tool (\$85) to monitor drench efficacy.

An optimum 2mg dose of selenium for supplementation of lambs from tailing

The proven performer for cost effective control of five clostridial diseases.

Benefits of Pre-Weaning Drenching in Lambs

A 2011 New Zealand Beef and Lamb trial showed that adding the tapeworm active (praziquantel) to the triple drench improved growth rate at weaning by 25g per day compared to the standard triple combination drench.
