

# FLY PROTECTION THIS SUMMER

## Pour-On Protection

**CLiK EXTRA**

20L

**\$1149**

14-26 Weeks protection  
21 days meat withhold

ACVM No. A011384

**CLiK SPRAY-ON**

20L ~~\$1119~~

**\$1079**  
SPECIAL OFFER

Up to 18 Weeks protection  
56 days meat withhold in Merino (35 days otherwise)

ACVM No A06006

**VETRAZIN**

10L

**\$169**

Spray On 10 Litre  
Up to 8 Weeks protection  
7 days meat withhold

ACVM No A5835

## Jetting/Dipping Products

**Elanco**

**Cyrex™ LIQUID**

7 days meat with hold

ACVM No A09917

5000 litres of wash per 10 litre pack.

Instant kill & up to 12 weeks protection

**CYRAZIN K.O.**

7 days meat with hold

ACVM No A010635

2500 litres of wash per 5 litre pack

Instant kill & up to 14 weeks protection

**CYRAZIN LIQUID**

7 days meat with hold

ACVM No A7509

2500 litres of wash per 5 litre pack.

Up to 12 weeks protection.

ROYAL CANIN

**PALLET DEAL** FOR ONLY **\$123.90**  
Royal Canin Energy 4800 PER 20KG BAG

**LIMITED OFFER +2 BAGS FREE!**

## Young Calf Drench Guidance

Calves Over 100KG

ACVM No A 10132

Matrix Minidose & Alliance are triple drenches (white/clear/mectin active ingredients)

Triple drench technology delays the onset of drench resistance

Triple action drenches are best practice for calves over 100kg

ACVM No A 10249

Pour-Ons & Injections

ACVM No A 9270

The Eclipse range provides combination technology for larger animals

ACVM No A 11151

All prices and promotions in this issue valid until the end of the month or while stocks last.

# ABORTION STORMS. TWO DISEASES. TWO VACCINES.

Don't leave your ewe flock unprotected. It's not worth the risk!

## TOXOVAX

All maiden ewes should be vaccinated at least 4 weeks prior to their first mating. Toxovax is a live vaccine manufactured to demand, so to ensure availability, you should place your order at least a month prior to your need.

**PLAN FOR SUCCESS:  
ORDER YOUR TOXOVAX® NOW!**

- ✓ Order from our vets at least 8 weeks before you intend to introduce the ram.
- ✓ One shot gives lifetime immunity.
- ✓ Up to 8% higher lambing percentages (3% national average).

## CAMPYVAX4

Campyvac4 is equally important and has been shown to increase lambing by an average 9%.

Apart from devastating campylobacter abortion storms or even obvious abortions, campylobacter remains a significant cause of unnoticed abortions and the births of dead or weak lambs. Protect maiden ewes with two shots, 4-6 weeks apart, prior to mating, or one shot in previously vaccinated ewes.

To get the best from your flocks performance for the next lambing season, speak with one of our team today. Vaccinate and secure more than just lamb numbers.

## 2 Tooth/Hogget Pre-mating Animal Health Programme (example for early April mating)

Jan 5th	Feb 5th	March 5th	April 5th
• Order Toxovax	• First Campyvac 4 shot (Sensitiser - 1ml/subcut) • Toxovax Shot 2ml (intramuscular)	• Second Campyvac4 shot (Booster - 1ml subcut) • Flexidine 1.5mls (intramuscular) • Oral drench Matrix hi min (includes Selenium)	• Put the ram out

## Flexidine

For the treatment of Iodine deficiency in sheep from mating to weaning.

**Use 4-6 weeks pre-tup for consistent iodine supplementation**

This is a prescription medicine and available only following veterinary consultation.

## Multine with B12 & Selenium for supplementation of lambs from tailing

## Pre-Mating Reminders

- Critical to get it right - impossible to correct any mistakes until next season
- Determines the potential performance of your flock for the upcoming season
- Nothing can increase scanning percentages once mating has finished

**Things to check include:**

- Ram health and soundness
- Ewe body condition
- Feeding levels
- Trace Element status
- Ability of the ewe to conceive and maintain pregnancy

## EFFECTIVE LAMB DRENCHING GUIDELINES

- Dose to the heaviest in the mob
- Use an effective combination drench. Matrix is best.
- Stick to 28 day drench interval
- Drench and put back in previous paddock for 1-2 days before shifting to clean pasture
- If drench intervals are stretched, larval challenge can rapidly increase and control of Autumn challenge is lost
- If you do intend to stretch drench intervals, put in a monitoring F.E.C. at 5-6 weeks

**Question: What sheep drench should I use?  
Answer: I'll check the result of my reduction test.**

**Weaning is the time to do a  
Faecal Egg Count Reduction Test  
Call your local Blue Cross Veterinary  
Centre to book one today!**
