

DRENCH RESISTANCE

Invest in your farm's future!
Know your drench status
by doing a reduction test.

Organise a full Faecal Egg Count Reduction Test (FECRT)

Weaning is the time to do a FECRT

- Analysis of the major drench activities.
- Larval culture and identification of resistant worm species.
- Full report for effective drench selection and an animal health plan.

Do the same drench ingredients
always give the same result?

NO! According to NZ research published in the
international journal "Veterinary Parasitology"

**Cattle were tested for faecal egg reduction on six
different farms comparing different drench treatments.**

- Eclipse was the significantly superior pour on achieving average egg reduction of 98% in a tight range, the lowest result being 93%.
- The other pour on brand gave an average egg reduction of 85% with a wide range of performance, some results being as low as 40% egg reduction.
- Trial by Leathwick et al, Veterinary Parasitology, 2016

The Veterinary Centre stocks proven animal
health products that we know will perform.
We will always be competitive but never at
the expense of quality or productivity.

Abortion Storms

Two Diseases Two Vaccines

Order ToxoVax EARLY!

Toxoplasma is present on 100% of New Zealand farms, and Campylobacter on 88%*¹ – but both are equally important. These two diseases can cause abortion storms with losses up to 30%, or more, of lambs*^{2,3}.

Preventing them takes two vaccines. Maiden ewes require 1 dose of ToxoVax and 2 doses of CampyVax4 ahead of mating.

A booster of CampyVax4 is required in the following year, and an annual dose is recommended before mating is completed.

ToxoVax

- ✓ Controls the risk of Toxoplasma. **Live** vaccine.
- ✓ Up to 8% higher lambing percentages (3% national average).
- ✓ Vaccinate at least 4 weeks prior to first mating.
- ✓ One shot gives a lifetime immunity.
- ✓ **MUST BE ORDERED AT LEAST 4 WEEKS IN ADVANCE OF TREATMENT** to ensure availability.

CampyVax4

- ✓ Controls the risk of Campylobacter.
- ✓ Increase lambing by an average 9%.
- ✓ Protect maiden ewes with TWO shots 4-6 weeks apart, and one booster shot in previously vaccinated ewes.

Example for early April mating 2 Tooth/Hogget Pre-mating Animal Health Programme

Flexidine

For the treatment of Iodine deficiency in sheep from mating to weaning.

Use 4-6 weeks pre-tup for Iodine supplementation, in a sustained release formulation.

* This is a prescription medicine only available following a veterinary consultation.

Pre-Mating Reminders

It is critical to get it right, as it is impossible to correct any mistakes until next season. The work pre-mating determines the potential performance of your flock for the upcoming season. Nothing can increase scanning percentages once the mating has finished!

Things to check include:

- ✓ Ram health and soundness
- ✓ Ewe body condition
- ✓ Feeding levels
- ✓ Trace element status
- ✓ Ability of the ewe to conceive and maintain pregnancy

Don't leave your ewe flock unprotected ... **it's not worth the risk!**

Clostridial Vaccine

DOSAGE REQUIRED: Sensitizer Dose in first year needs to be followed with a Booster 4-6 weeks later, and a Booster every 12 months thereafter.

MULTINE

5-in-1 Clostridial Vaccine

The proven performer for cost effective control of five clostridial diseases.

NOTE Plain, B12 or B12 Selenised to be used on new lambs, do not use Selenised Only on lambs.

The primary preventable clostridial diseases are ...
**Tetanus • Pulpy Kidney • Black Disease • Black Leg
Malignant Oedema • Sudden Death**

Cattle Drench Guide for Sustainable Production

Calves Under 100kg

- Oral drenching young calves is best practice
- Clear/white combinations should be used up to 100kg liveweight

ARREST C

5 Litres \$259.00 Incl GST

Don't use triple action drenches that contain Abamectin as these can be toxic to small calves

COOPERS SCANDA Selenised

10 Litres \$389.00 Incl GST

Calves Over 100kg

COOPERS ALLIANCE

- Coopers Alliance is a triple drench (white/clear/mectin active ingredients)
- Triple drench technology delays the onset of drench resistance

Triple action drenches are best practice for calves over 100kg

10 Litres \$679.00 Incl GST
