## COMPARISONS OF LONG ACTING EWE ANTHELMINTIC PRODUCTS

\*Bionic \*Extender SeCo \*Exodus LA \*Cydectin LA

### 3 Reasons

#### For Using Long Acting Products in Ewes

1. Ewes hold condition and are heavier at weaning.
2. Lambs are heavier at weaning benefiting from ewes milking more (especially with multiples).
3. No Dags!

#### Products currently marketed

**Bionic PLUS** – A 100 day combination capsule with continual release of abamectin (new improved formula with 15% more abamectin) and albendazole, plus selenium and cobalt. Withholding time 126 days.

**Bionic** – A 100 day combination capsule with continual release of abamectin and albendazole, plus selenium and cobalt. Withholding time 128 days.

**Extender SeCo** – A drench capsule which releases albendazole (white drench family) for 100 days, plus selenium and cobalt. Suitable for ewes up to 80kg. A priming dose of effective drench must be given to the ewes when the capsules are inserted. Withholding time is zero.

**Exodus LA and Cydectin LA** – These products contain a form of moxidectin injection in a novel base which increases their length of action. It is active against Trichs for 42 days, and Ostertagia for 112 days.

**Cydectin Injection** – This product contains moxidectin which has some persistent worm killing action following a single injection. It stays active for up to 30 days, but can suppress the egg output of the ewes for much longer. It is best used 2-4 weeks pre-lamb. Withholding time is 28 days for sheep meat.

**Eweguard** – This product combines Cydectin injection with a 6 in 1 clostridial vaccination.

**END OF LINE**  
Limited stock available!

Bionic is a combination drench product containing abamectin and albendazole, plus selenium and cobalt, in a 100 day sustained release capsule.

Exodus LAI is a long acting moxidectin injection for sheep from Boehringer Ingelheim, designed to give long acting worm control from a single subcutaneous injection.
