Long Acting Injection FOR SHEEP

Is Moxidectin Long Acting the right choice for my farm?

Involve your Vet in decision making around moxidectin long-acting injection treatments. Get advice on management techniques like refugia and drench testing, as we try to mitigate parasite resistance ... a real issue on farms today!

Long Acting Worm Control

- 91 Days protection against Haemonchus contortus
- 112 Days protection against Ostertagia circumcincta
- 42 Days protection against Trichostrongylus colubriformis

IMPORTANT

Target Treatment

Select animals based on risk. Target long-acting drenches towards multiples and light condition stock.

Refugia

Don't drench some stock to ensure that there are still worms that are susceptible to drench in the worm breeding population.

Trace Elements

These treatments are expensive. Only consider them when they give you a significant economic return.

Information

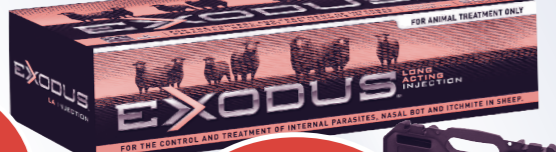

- Base your decisions on facts.
- Trace Element results
- Drench Checks
- Feed Budgets

Use Exodus or Cydectin LA for long acting worm control from a single moxidectin subcutaneous injection. Dose 1ml/20kg

SMARTSHOT® B12 PLUS Se

long acting Selenium and B12 restores deficiencies with the convenience of just one injection.

- B12 & Selenium for up to 6 months in sheep.

Selenium and Cobalt deficiency is common in NZ as you can see from the maps. Our area is traditionally low in Selenium. * Smartshot 1.5ml Dose delivers 18mg Selenium and 4.5mg Cobalt compared to Bionic Plus delivers 24mg Selenium and 118mg Cobalt.

Anthelmintic Treatment FOR EWES

IMPORTANT

Many options are available for worm control on ewes around lambing time. The decision on which products to use should be based on productivity and sustainability.

Sustainability

Sustainability means maximising your returns to stay in business, but it also means you must use products which don't threaten your farming future - aim to use options that will still work for you in 10 years time!

Productivity

Which product, in what class of stock, will give the best return on investment?

Ewes carrying multiples eating close to the ground on a tight winter feed budget can get significant advantages using long acting worm control. But a fat crossbred ewe carrying a single lamb, and not under feed pressure may be left untreated!

Long Acting Injection Triple Active Novel Active

Clostridial Vaccine

Sheep

Nilvax 5-in-1 SELENISED \$129 Incl GST
The only pre-lamb vaccine that provides up to 4 months protection for suckling lambs.
