BUY 6 \$739.50 Incl GST

## Abortion Storms

Two Diseases  
Two Vaccines

### Toxoplasmosis

ToxoVax must not be given closer than four weeks to tupping.

### Campylobacter

CampyVax4 two doses, 4-8 weeks apart, given pre-tup. Booster in second year is also advised.

## Flexidine

Iodised Oil Injection

\* This is a prescription medicine only available following a veterinary consultation.

Sheep (all ages) 1.5ml  
Cattle 3-6ml

NIL Meat & Milk WHP

Flexidine<sup>™</sup> provides a long-acting supply of iodine. In deficiency, supplementing iodine leads to:

- ✓ Decreased perinatal deaths
- ✓ Increased lamb vitality
- ✓ Reduced goitre
- ✓ Increased fertility

Only Flexidine<sup>™</sup> prevents iodine deficiency from conception to lambing in one simple injection.

## Long Acting Worm Control

Use Exodus or Cydectin LA for long acting worm control from a single subcutaneous injection.

- Active: Moxidectin
- Dose 1ml/20kg

**Exodus** Long Acting Injection

Replacement ewe lambs, or late season lambs to be overwintered, are often exposed to significant worm challenges. Careful use of Long Acting Injection drenches can give significant production advantages.

**Cydectin** Long Acting Injection for Sheep

When to use?

### IMPORTANT INFORMATION

## Bionic Plus Unavailable in 2023

Now is a good time to start thinking about your drench options

### Important Principals

The principles of using long acting drench products still apply and provide guidance in the decision making process for 2023:-

- 1 Don't use them unless there is a significant financial advantage.
- 2 Keep up with best practice, including principles of refugia and monitoring.
- 3 L.A. products can give significant gains, but make sure this is sustainable.

### Options

The options available to you are :

- 1 Review your reliance on L.A. drench products – is there a better way?
- 2 Long acting moxidectin products are available and provide an equivalent length of protection.
- 3 There are selenium and b12 mineral supplement options also available to consider.

**ACT NOW!**

Contact your territory manager or closest Blue Cross clinic to organise an appointment with one of our vets to make a plan for the months ahead. We will be providing updates and further advice on this topic regularly and share that with you to help with your decision making.

# Drenching Dairy Cattle in Autumn

- There is considerable trial work available both nationally and in our district showing that drenching lactating dairy cattle is likely to result in an increase in milk solids production.
- Cydectin pour on and Eprinex are 2 of the most effective anthelmintics, both having significant persistent activity against Ostertagia species of 4 weeks or more.
- Both Cydectin and Eprinex have nil meat and nil milk withholds making their use in lactating herds very easy to manage.
- Abamectin Pour-on products like Genesis Pour-On and Reflex Pour-On now have a Milk WHP of 35 Days and so makes them unsuitable for lactating cows.

Whatever your approach to autumn drenching of your herd we are always available to give professional advice on the products available that will optimise your herd performance.

# Injectable Cattle Drench FOR YOUNG STOCK

**NEW!**

## DECTOMAX V

doramectin and levamisole injection

- > New Dual Active Drench Technology - resistance breaking
- > High efficacy, broad spectrum parasiticide
- > Easy injectable administration for highly reliable dosing
- > Treats gastrointestinal worms, cattle tick, sucking lice

Dose Rate: 1ml/25kg

**35 MILK WHP** **42 MEAT WHP**

Young cattle are rapidly growing and are yet to develop natural immunity against worms, so it's important to use a highly efficacious dual active injectable.

**500ml**

# Novel Drenches

**BACK IN STOCK!**

The most effective drenches available ... use them strategically!

Novel Active Drenches for

1. **Quarantine Drenching** – new stock arriving on farm.
2. **Exit Drenching** – strategic use at the end of conventional drench programmes e.g. summer lamb drenching, pre-lamb drench use.
3. **Knockout Drenching** – on detection of drench resistance or when conventional drenching is no longer fully effective.

# Trace Element Supplements

## Selovin LA

Long-acting Injectable Selenium

For the prevention and treatment of Selenium deficiency which could lead to ...

- ✓ **Low fertility**
- ✓ **Low milk production**
- ✓ **White muscle disease**
- ✓ **Impaired immunity & ill thrift**

**VET ONLY**

**SELOVIN LA™** long-lasting injectable selenium supplement, providing up to 12 months protection in a single injection.

**From 38c\***  
Per Dose Excl GST

\*0.5ml Dose for Lambs at Weaning

## SMARTSHOT® B12 PLUS Se

Smart Shot long acting B12 and selenium restores deficiencies with the convenience of just one injection.

- B12 for up to 6 months in sheep, and 3-4 months in calves,
- Selenium in both species for at least 6 months.

**Superior Liveweight Gains**

New Zealand trials carried out by AgResearch demonstrate greater liveweight gains compared with untreated controls, illustrating the benefit of treating with SMARTSHOT® earlier ensuring your lambs reach their target weights sooner and more efficiently.

**From 66c\***  
Per Dose Excl GST

**≈ 100g/day**  
**IMPROVED GROWTH RATE**

**4kg (LW)**  
**HEAVIER AT WEANING**
