

Trace Element Supplements

Selovin LA
Long Acting Injectable Selenium

Selenium is necessary for growth and fertility. If deficient in Selenium, cattle and sheep can suffer from poor growth rates, reduced production, lower fertility and poor immunity.

SmartShot
B12 plus Se

Restores deficiencies with the convenience of just one injection over a 6 month treatment period.

*For sheep and cattle grazing cobalt-deficient pastures.

Sheep Lice Treatment

With lice numbers increasing over winter and degrading fleeces, treatment prior to winter is the best time. Shearing alone will remove up to 80% of lice but effective control really needs an effectively applied off-shear pour-on. Ready to use spray on options are easy to use, effective and safe to handle.

T-BAR POUR-ON LICE CONTROL

T-BAR POUR-ON LICE CONTROL	<p>56 MEAT Withhold</p> <p>60 WOOL Withhold</p>	 <p>Encore 20L Active(s): Triflumuron, Imidacloprid For the knockdown and long-term control of body lice (Bovicola ovis) on all breeds of sheep.</p> <p>Up to 20 Weeks Lice Protection</p> <p>\$729.00 Incl GST</p>

Novel Active Exit Drenches

ZOLVIX PLUS
ACTIVES:
Monepantel, Abamectin

STARTECT
ACTIVES:
Derquantel, Abamectin

April-May is time to use a novel active drench. After repeated exposure to a traditional drench there is the chance that resistant worms may have accumulated in the gut. Cleaning these out prior to the winter with a novel active protects your farming future.

Drenching Dairy Cattle in Autumn

- There is considerable trial work available both nationally and in our district showing that drenching lactating dairy cattle is likely to result in an increase in milk solids production.
- Cydetin pour on and Eprinex are 2 of the most effective anthelmintics, both having significant persistent activity against Ostertagia species of 4 weeks or more.
- Both Cydetin and Eprinex have nil meat and nil milk withholds making their use in lactating herds very easy to manage.
- Genesis cattle pour on is a premium abamectin product with 14 days persistent activity. It has 35 days meat withhold so needs to be managed carefully when making culling decisions.

Whatever your approach to autumn drenching of your herd we are always available to give professional advice on the products available that will optimise your herd performance.

Cattle Lice Treatment

Mat O'Sullivan BVSc
Veterinary Centre Oamaru

Treating lice in late summer/early autumn may be necessary but remember the earlier you treat the higher the likelihood that you'll need to treat again, as numbers have a longer period to re-populate, and winter is when conditions are optimal. You can target just lice with **Destruct** (organophosphate) and **Blaze** (synthetic pyrethroid), or you can use products like **Genesis** and

Cydetin which will target both lice as well as internal parasites which are often more of an issue at this time of the year.

Controlled Release Anthelmintic with Mineral Capsules

- 100 days protection against gastrointestinal parasites
- Treatment of Selenium deficiency for 250 days
- Treatment of B12 deficiency for 100 days
