

Elanco Rumensin

ANTI-BLOAT CAPSULES

1. Monensin is a rumen modifier which changes the rumen microflora in such a way that bloat is prevented.
2. Rumensin treated cattle have 7% more energy released from the diet.
3. New Zealand trials have shown a 15% weight gain advantage in treated beef cattle.

BVD A serious problem needs serious solutions!

The cost of BVD is staggering:

- *Dairy farm (406 cow herd) - \$11,655 per year!
- *Beef herd (100 cows) - \$3000-\$9000 per year!

Two of the key components to a successful BVD control program are **vaccination** and **testing calves**. Cows need their booster vaccination 4 weeks prior to mating.

BVD Vaccines are now available with 12 month fetal protection claims!

Call us today for veterinary advice on protecting your herd!

Benefits of Pre-Weaning Drenching in Lambs

A 2011 New Zealand Beef and Lamb trial was set up to analyse the benefits of a pre-weaning drench, 3 to 4 weeks prior to weaning from mothers.

The findings were that

- A drench pre-weaning improved weaning weight by 1kg.
- Adding the tapeworm active (praziquantel) to the triple drench did improve growth rate at weaning by 25gm per day compared to the standard triple combination drench.
- Dag scores were further reduced with the inclusion of tape drench compared to straight triple drench.
