# WEIGHT MANAGEMENT

## If my Dog's a bit chubby, does it matter?

More and more commonly we are seeing pet's carrying more weight than is ideal. And just like in humans, that extra weight can take its toll on the general health and quality of life, affecting ...

- **Arthritis** – slowing down, painful to move, less active, doesn't want to play anymore.
- **Diabetes** – abnormally high glucose in the body, potentially life threatening disease.
- **Breathing difficulties** – increase effort in breathing seen, reduced exercise, panting.
- **Heart Problems** – extra load and effort on the heart to do its job when carrying extra weight.
- **Surgical complications**
- **Increases anaesthetic risk**
- **Constipation**
- **Increased blood pressure**

The good news is we can help alter your pets current exercise level and diet, or look at using one of our weight loss management diets to help you pet lose weight. Contact our team of experienced vets and vet nurses.

# FLEA TREATMENT

Fleas are the most common external parasite that affects dogs and cats. They can make your pets very uncomfortable and trigger them to repeatedly bite and scratch their skin. Fleas can also cause certain illnesses, which is why it's important to treat your pets and get rid of those little bloodsuckers. This is why flea treatment and management is important. Most treatments are monthly or 3-monthly, but check to ensure you give your treatment at the correct intervals.
