

WANTED TINY TIGERS!

**Do you have a pregnant cat?
Do you have a litter of kittens
that you don't know what to do with?**

Our Tiny Tigers intake is underway. The Veterinary Centre takes on kittens that need a home. Prior to being taken on, all kittens and the Queen (mother cats) need to undergo a health check. The kittens are then desexed, microchipped, vaccinated and given a flea and worm treatment, so they are ready to go to their new home.

We also require all mother cats to be speyed and offer a 25% discount when paid in full on the day.

Contact your local clinic today to see if we can help!

HORSE WORMERS

Summer Horse Worm Treatment

Protect your horse from parasites with an effective horse wormer. Parasites such as roundworms, tapeworms, and bots can cause serious health problems for your horse.

An allwormer paste in syringe is a popular, easy to administer and effective option for worm treatment of horses. Our vets are able to help recommend the best worming solution for you at this time of the year, and can organise a Faecal Egg Count (FEC) to check the need and effectiveness.

Promectin® PLUS ALLWORMER PASTE FOR HORSES

Broad spectrum worm paste for the control of roundworm and tapeworm.

Our Special Price
32.4g \$18.95

NORMALLY \$23.50

3kg Chicken \$54.90

NORMALLY \$74.90

Hartz Roll About Mouse Catnip Toy

\$9.60

Hours of fun for your cat!

PUPPIES & DOGS

Summer Safety Tips for Dogs

Be a responsible pet owner during these hot months.

Shade – provide your pet with shade from the hot sun. They can get sunburn and heatstroke, and especially do not leave pets in a hot vehicle.

Water – always have fresh water available.

Paws – hot paving will burn their paws.

Fleas – fleas like warm weather, so keep their flea and worm treatments current.

Barley Grass – we all like to walk over the warmer months but be aware of seeding grass, we see a lot of barley grass issues in feet and ears over this period.

BlackHawk® Working Adult Dog Food

For active dogs try Black Hawk Working Dog 20kg.

32% Protein – Highly digestible protein with real meat.

22% Fat – A blend of healthy fats and oils, including emu oil.

Our Special Price

10kg \$89.90

Adult 10kg –

Available in Chicken & Rice and Lamb & Rice for ALL Breed Sizes

Puppy 10kg –

Available in Chicken & Rice and Lamb & Rice for Medium & Large Breeds

PROSTATE DISEASE – Joe's Prostate Issue

Claire Lin BVSc – Veterinary Centre Oamaru

It's not just men that need to be aware of prostate issues.

Joe, a retired male huntaway, came to the Veterinary Centre after becoming unwell and going off his food.

DIAGNOSIS – When examined he had a very high temperature, and was hunched and uncomfortable. We admitted Joe and started with blood and urine tests, and scanned Joe's prostate using ultrasound, taking prostatic samples with ultrasound guidance. We found both his urine and prostate samples revealed bacteria and high levels of inflammatory cells, confirming that Joe had a urinary tract infection and Septic prostatitis.

DISEASE – Septic prostatitis is a common prostatic disease in entire dogs. It most commonly occurs when bacteria from urinary tract infections spread into the prostate, causing severe discomfort, fever and lethargy, and can develop into prostatic abscesses that are difficult to treat.

TREATMENT – Septic prostatitis requires extended periods of antibiotics and has a high likelihood of recurring while the dog is entire. Neutering is strongly recommended in dogs with septic prostatitis hyperplasia to improve recovery, and reduce the risk of recurrence or worsening.

RESULT – Joe was neutered and treated with antibiotics. He responded very well to treatment and bounced back quickly.

There are many benefits to neutering your dog. Not just unwanted litters, it can also reduce behavioural issues, and reduces the risk of certain diseases. If you have any queries about the right time to neuter your dog, then please visit your local Veterinary Centre.
